Can you turn the .gecorr image? I can only do simple 90/180/270-degree turns—lame. ☺

And maybe resize them to around 600 (at most) pixels wide? I think I'm supposed to use these images as an "Update from August 9th" entry. But, of course, it's all headless chickens around here...

If you need a different size, one of the GIS folks could open it for you.

No, but as they say below 24mm2015_08_09_15_36_30.gecorr is a jpeg of the same image.

Are you able to open the .kmz file?

Image 24mm2015_08_09_15_36_30.kmz is a google earth image showing attenuation of the plume;

24mm2015_08_09_15_36_30.gecorr is a jpeg of the same image. IMG 0264 is a 1000 Ft AGL oblique shot north of Durango.
